

## Case Study: SACWIS Project for State of Ohio

### Client: The State of Ohio (United States)

#### Client Situation

The State of Ohio (United States) was deploying a Business Intelligence (BI) solution based on Cognos technology and the goal was to meet the requirements of a larger end user base by providing PDF reports that consolidated data from various data stores. The issues client was facing included data integration, reconciliation, and reporting of consolidated data.

#### Our Solution

CSSI worked with Cognos on the following to get the process started:

- Business process definition
- Data Analysis and Mapping design
- Conversion design
- Specification preparation

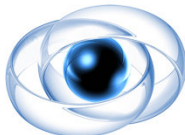

Second phase of the project included:

- Data modeling using Framework Manager
- Development of reports using Report\*Net
- Unit Testing
- System Testing
- Productionalization

The challenge was to integrate various systems running in multiple databases and platforms.

#### Benefits

- Data consolidation and Data reconciliation
- Generation of PDF format reports
- Reduction in **Total Cost of Ownership** (TCO) by 45% using CSSI's BI delivery model
